## Abstract

### Abstract:

The aim of the article is to create a register of risks of the aviation disaster Metrojet 9268, to identify the causes and sources of these risks. The article content is focused on the case study of The Metrojet 9268 aircraft accident, which is the starting point for searching the possibility of using state-of-the-art technology in order to deal with the terrorist threat. In case of screening and security controls even for the possibility of the fight against organized crime. The main focus is not in the review and description of the air disaster, but in the register of external and internal security risks of the selected air disaster, and in the subsequent proposal of further research of selected technologies in the framework of doctoral studies.
