## Abstract

### Abstract:

The presented project proposal explores the importance of perceiving the security of society and the safety of the citizens as an important factor in the quality of life, the support for exploration and the search for optimal tools of society's reaction, especially to the criminality and the problems of marginalized and socially excluded groups in the Slovak cities. In that context the complexity and interdisciplinary focus is this criminological and security-legal project compiled and prepared. The absence of nationwide criminological and security-legal research conducted in the security environment and the relationship between the various threats to the regional knowledge and research problems with support and the using of modern ground and aerial tools in the urban environment is identified. The paper answers the pre-research questions why research is to be carried out and which are the main research activities that will determine the course of scientific work in order to identify the scientific problem and the appropriate solution methodology for creating the new project within Košice urban environment.

### I. Introduction

The first ideas for extending the research in the selected cities of Košice, Banská Bystrica and subsequently Bratislava were formulated in the work the Criminological and Legal Research in Cities with the basic "Modus operandi" of the intended criminological research on the example of the regional town of Banská Bystrica in the monograph focused on the criminology issues [1]
